

---

muautocombhack was created to provide a solution for the problem of not knowing what to do with your hand. When you think about it, having a single hand can lead to some frustrating moments in daily life when utensils are used across all surfaces utensil-free, such as in photography. Another time when you might find yourself in a tricky position is when dealing with menus and restaurant orders.

Now that we have solved these problems with a few taps or manual swipes, this hack is going to change the way the world works. Imagine someone in the hacker scene (a guerrilla hacker) who does not want people to know that he is a hacker. He tries to do everything like a non-hacker, but the whole world sees him as a hacker because of his actions and behaviors. This is exactly what it is like for Non-Hackers who use one hand and try to keep up with normal two handed social interactions.

muautocombhack aims to make things easier for these Non-Hackers by providing step-by-step instructions on how to handle every possible situation in your daily life, one section at a time. As a hacker in a society that only uses the regular three-finger tap, muautocombhack is going to help you step-by-step from the simplest to more complex interactions with flexible hand positioning.

The Problem: When can I use my single hand? In most situations, you should try to use two hands for better efficiency. But exceptions exist, such as when swiping menus or attempting to keep up with a fast-paced conversation.

The Solution: The trick is that you have to learn how to take advantage of your right hand in every situation and behavior where utensils are used without utensils.

Tap Instructions: 1) Tapping: The most common form of interaction for menus and cards.

2) Swiping Directions (left/right): These functions are helpful for when your right hand is busy.

3) Zooming: Similar to how hackers zoom in and out with their left thumb, Non-Hackers can use this function to make left and right swipes easier and more precise.

4) Hands (left/right): This function allows you to switch hands if needed.

5) Double tap: This action is used when you want to do something fast or precise with your right hand.

6) Sticky finger: If your finger is not working well, you can still perform the tappable function by tapping on the finger that is being used to guide you through your task.

7) Hybrid Movement: This action combines movements from both left and right hands. This allows you to carry out more complex movements with just one hand.

8) Manipulation: Manipulation actions are actions that require two hands because there are two surfaces involved. For example, if someone asks for a glass of water, you would use both hands to pour it or lift it up to drink it (see this video for more complex movements).
